

Surface and Upper Ocean Circulation from the combined use of in situ and spaceborne observations

GLOBAL 3D Ocean Temperature, Salinity and Geostrophic currents

Complementary to ocean state estimate provided by modelling/assimilation systems, a multi observation-based approach is available through the **MULTI OBSERVATIONS (MULTIOBS) Thematic Assembly Center (TAC)** of the Copernicus Marine Environment Monitoring Service (CMEMS).

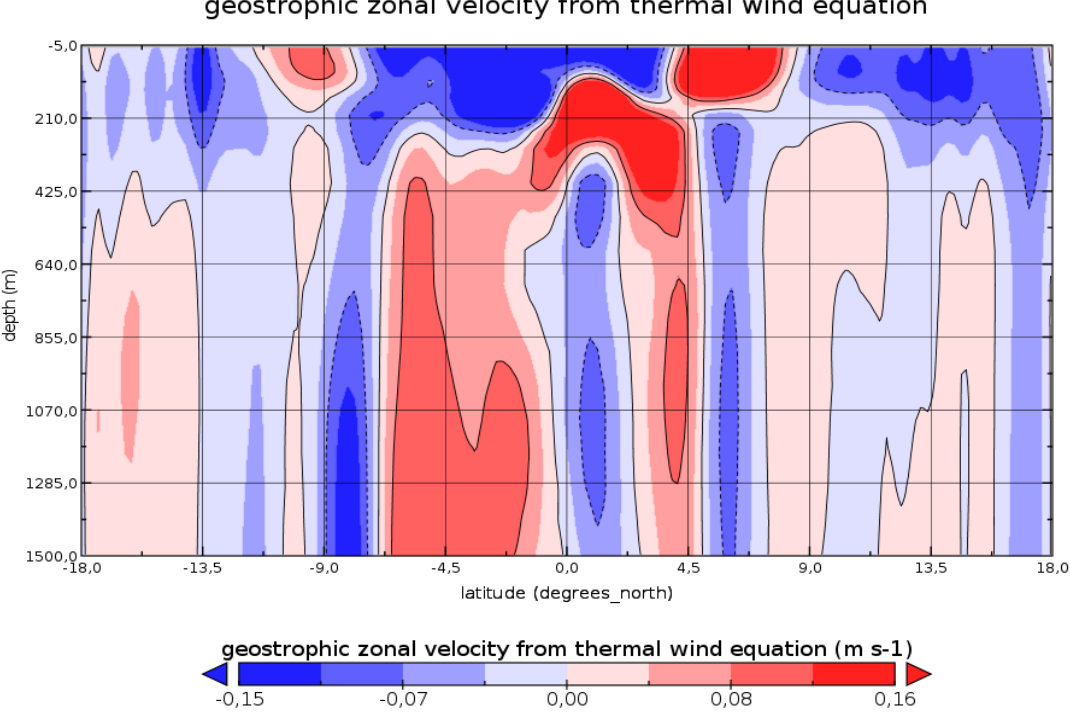

CMEMS MULTIOBS TAC proposes **Qualified Global Ocean products** based on **satellite & in situ observations** and state-of-the-art **data fusion techniques**. These products are fully documented and, are distributed through the CMEMS catalogue (<http://marine.copernicus.eu/services-portfolio>).

They are available in Near-Real-Time (NRT) or as Multi-Year Products (MYP) for the past 10 to 25 years.

4 (2 NRT - 2 MYP) MULTIOBS products are dedicated to ocean currents. Satellite observations (GOCE Geoid, altimetry SLA, multi-satellite SST, SMOS SSS), in situ observations (Argo floats & surface drifters), but also model wind stress (ECMWF) associated with data fusion techniques are used to generate these 3D & 2D ocean velocities

Validation of the equatorial currents

MULTIOBS (2013 mean, 170°W)

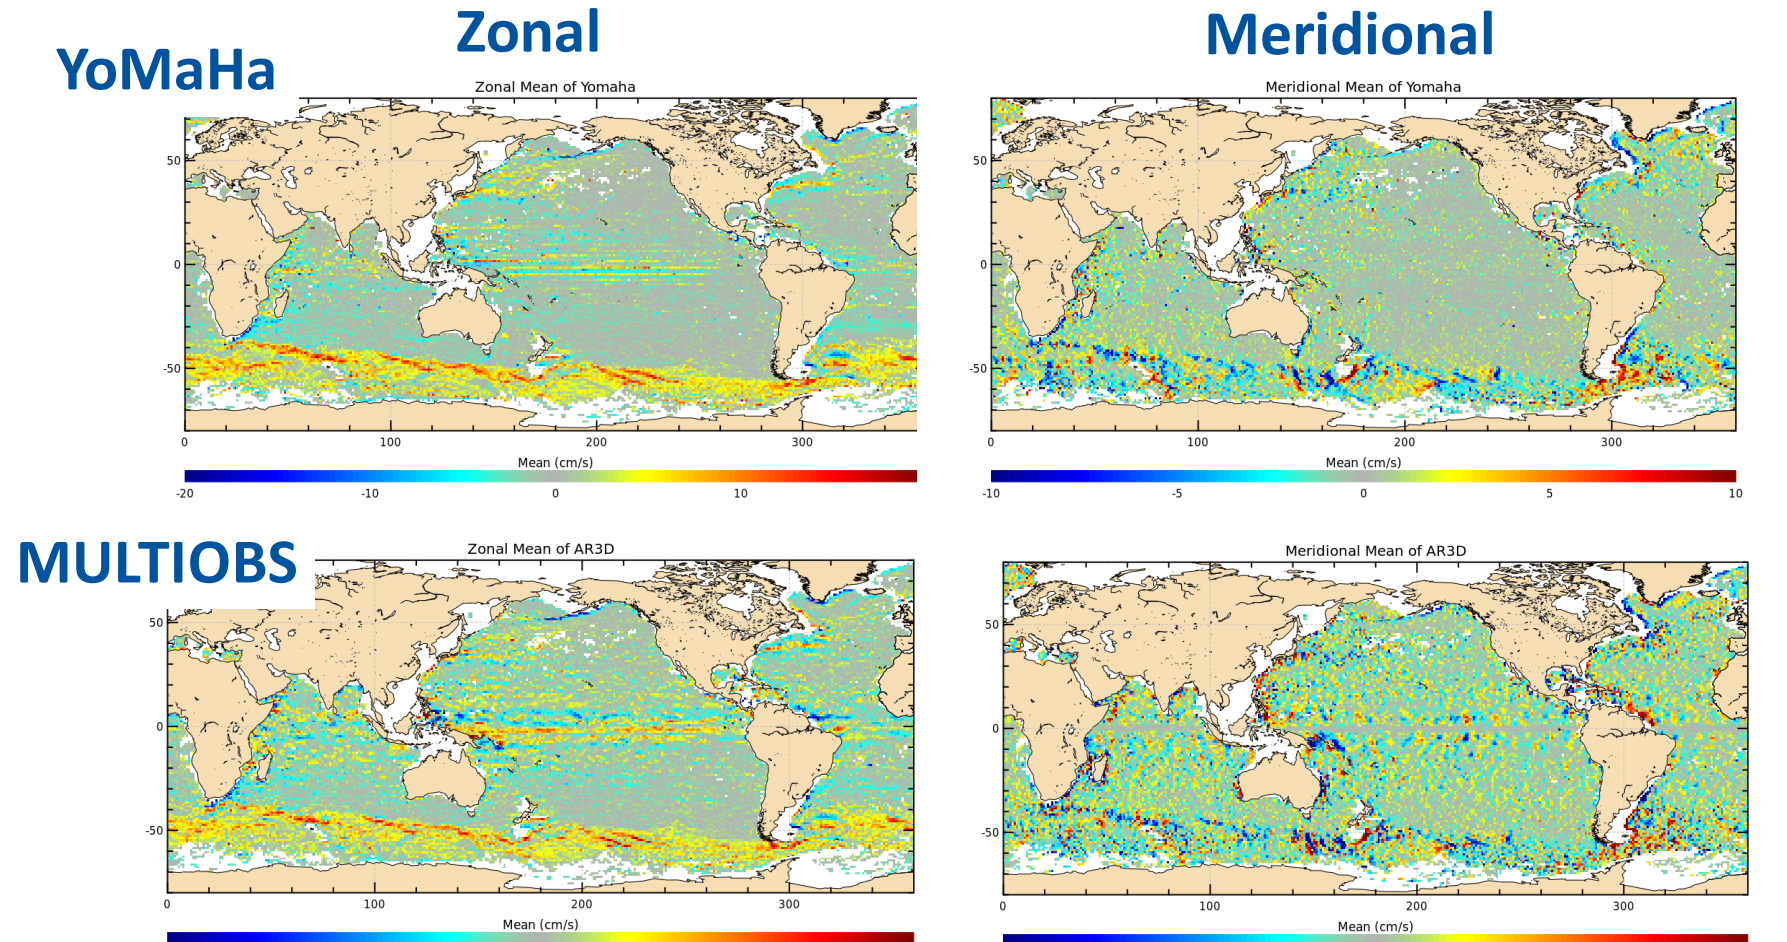

WM-ADCP (1993-2015)

Cravatte & al., JPO 2017

Validation at 1000 m

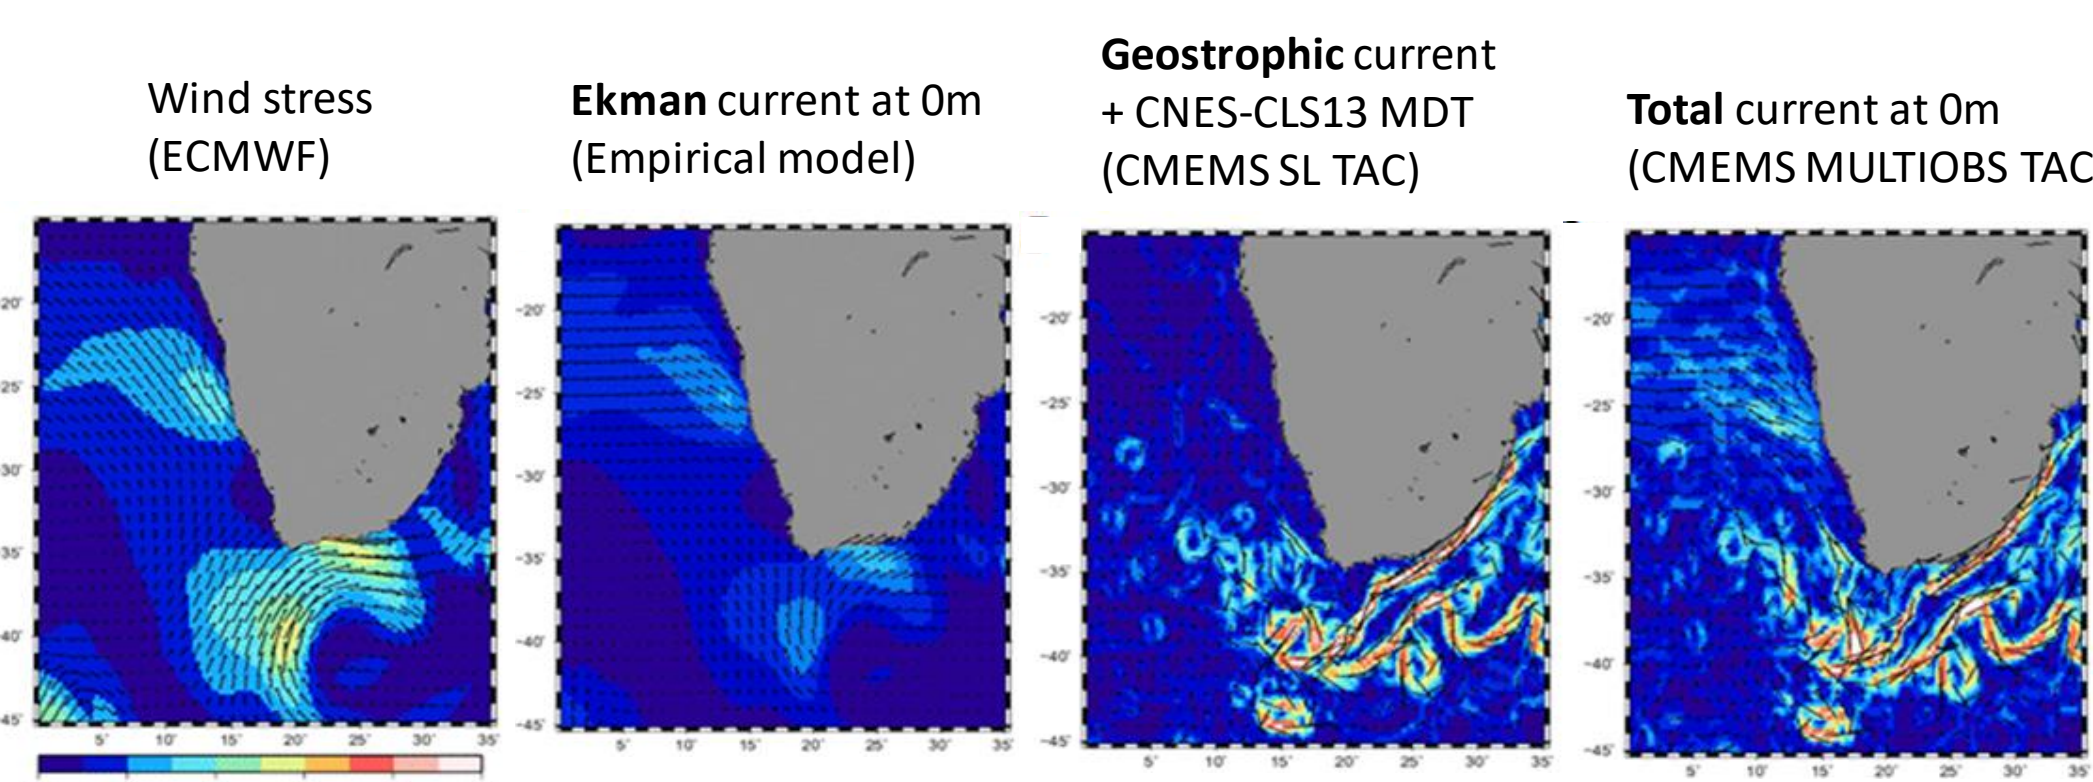

Mean of MULTIOBS 3D versus YoMaHa 1998-2017 in 1°x1° boxes (cm/s)

GLOBAL 2D Ocean surface and near-surface currents

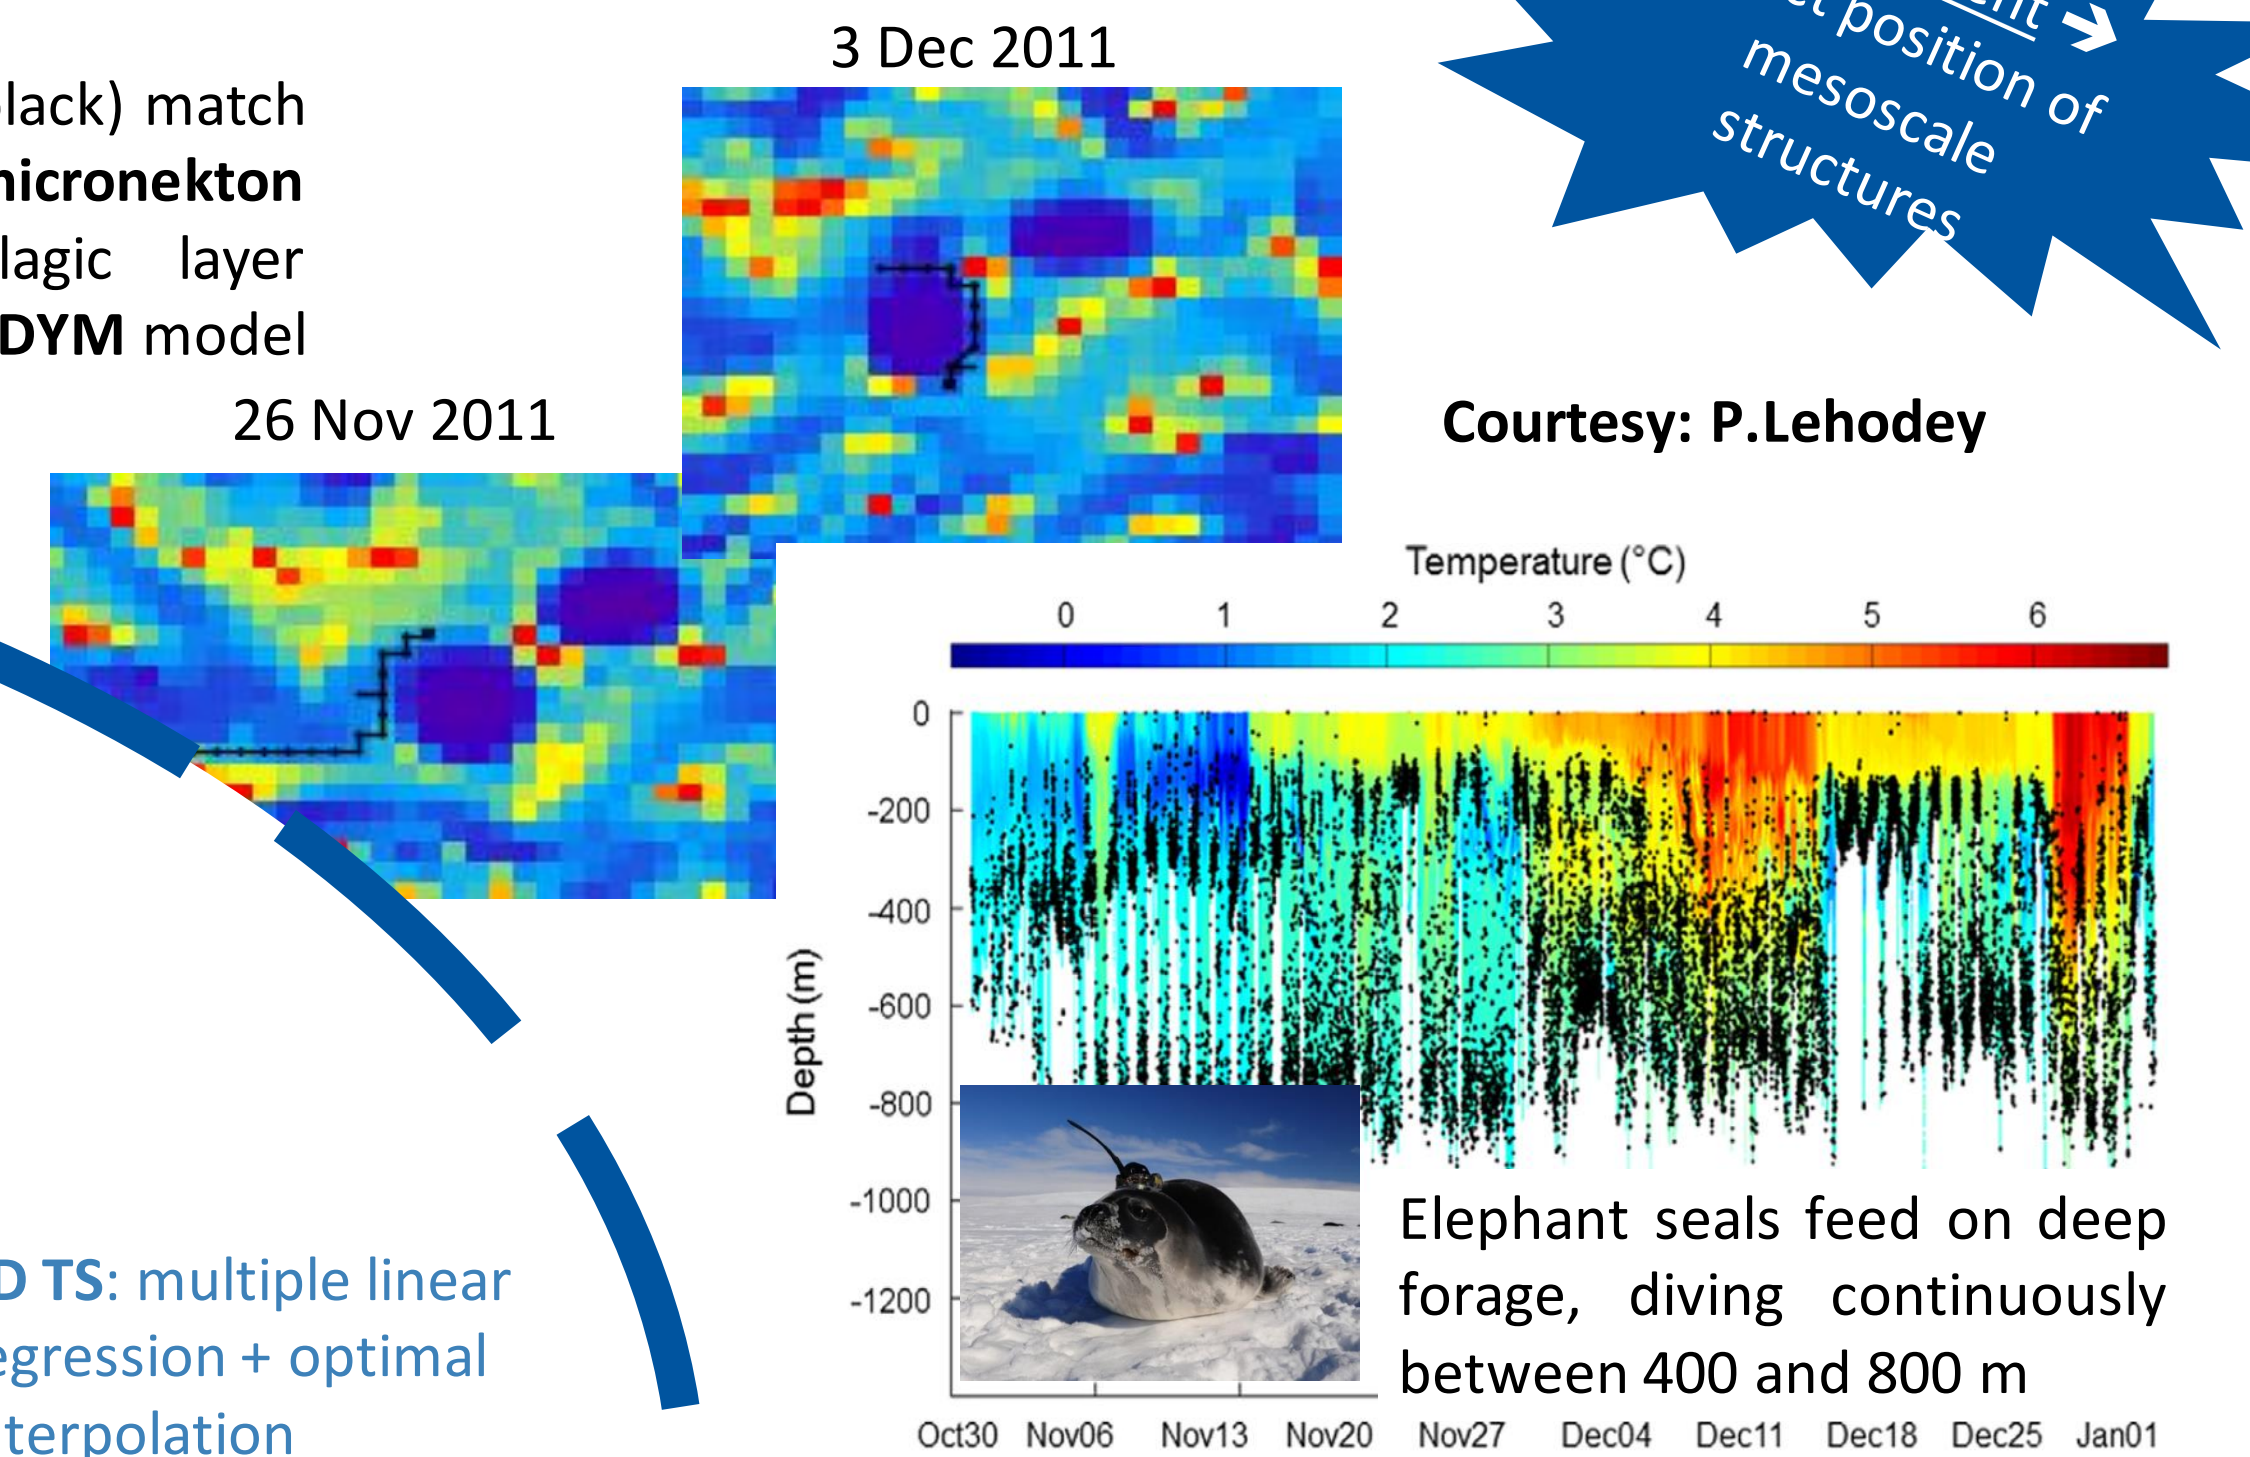

1/4° horizontal resolution
2 levels: 0m, 15m
NRT: 6-hourly / daily / monthly
REP: 3-hourly / daily / monthly
NRT (-1D)
REP: 1993-2018

Copernicus-Globcurrent

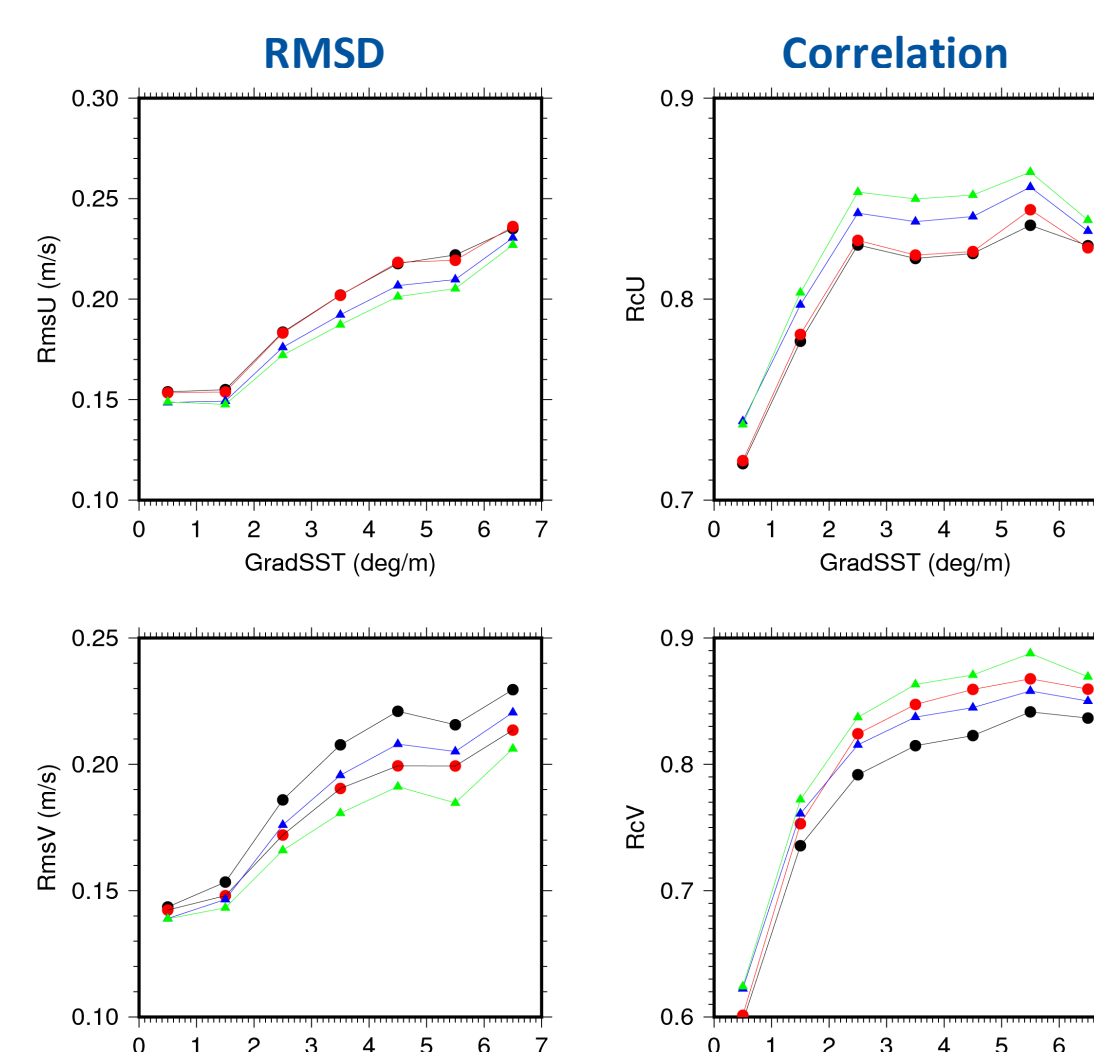

OSCAR Bonjean&Lagerloef, 2002

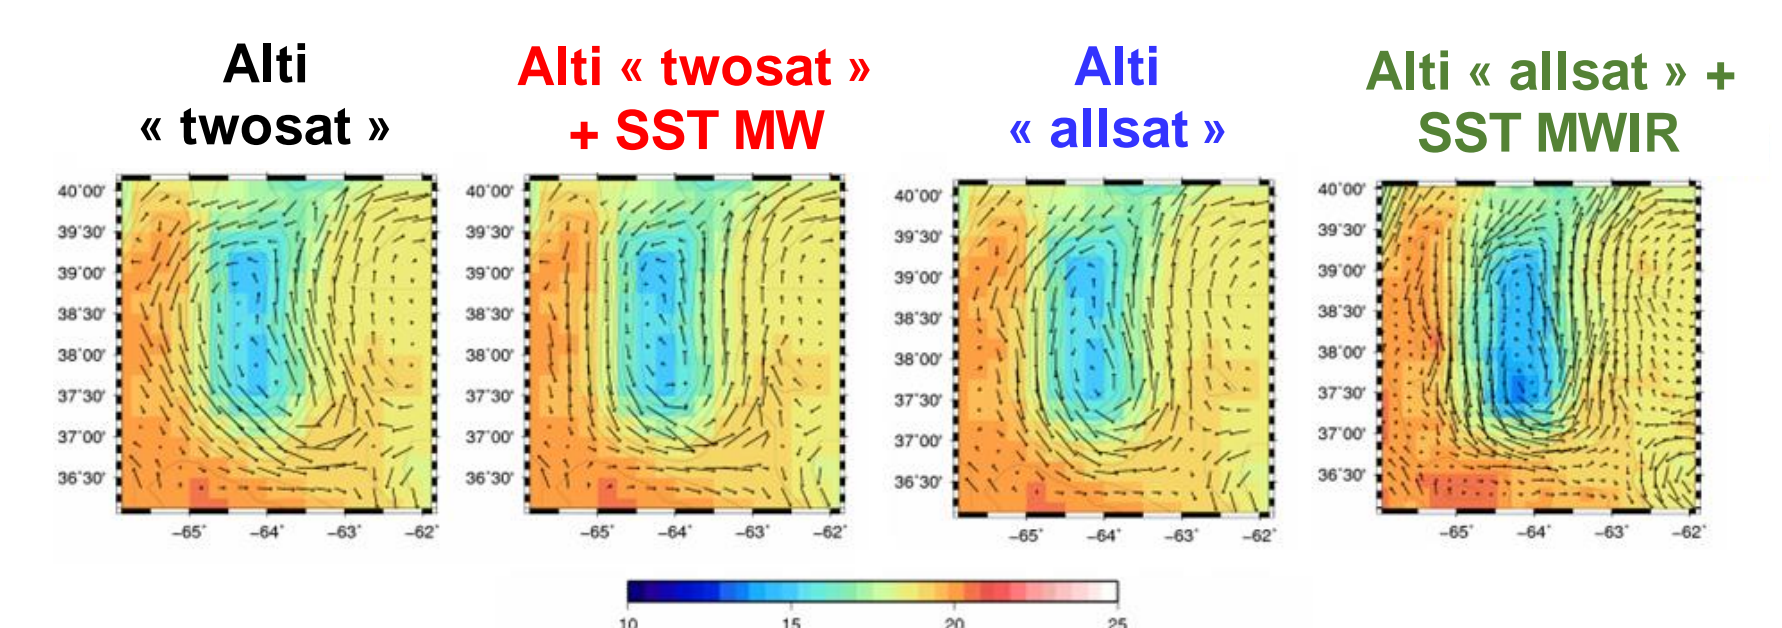

Improved currents from the synergy between altimeter velocities and SST

→ Based on the inversion of the heat conservation equation for the horizontal velocities
→ Using the altimeter geostrophic velocities as background and prescribing source and sinks terms a priori values and associated errors, + successive SST fields (Piterberg, 2009)

Validation versus SVP drifters – 2014-2016

Alti « twosat » Alti « twosat » + SST MW
Alti « allsat » Alti « allsat » + SST MWIR
